

Solution Safari and esis– reports not showing

When generating a report, Safari opens pop–up window with a blank screen– how to fix this issue– thanks to the ESIS help desk for this solution This is also a fix for black printer friendly screens occurring in Mclasshome

Open the Finder (Smiley Face) on the dock

Click on "Macintosh HD"

Double–Click on "Library"

Double–Click on "Internet Plug–ins"

Drag the file named "AdobePDFViewer.plugin" to the garbage can on the dock.

This process will cause Safari to use it's own built–in PDF viewer rather than Adobe Reader.
